## WORK EXPERIENCE

---

### Software Engineer

Tata Consultancy Services, Kolkata, India

August 2024 - Present

- Built a multi-tenant affiliate data platform with tenant-isolated Kafka topics, databases, and feed exports, supporting multiple brands.
- Developed a **Spring Boot + Spring Batch** ETL microservice processing **millions of product records**, enabling a real-time product data pipeline from multiple source systems and APIs.
- Developed **AI-powered backend workflows** using LangChain, LangGraph, AI agents, LLM APIs, RAG pipelines, prompt engineering, and structured AI outputs.
- **Integrated AI services** into business applications to automate report generation, document understanding, data summarization, and intelligent user workflows.
- Developed a **Spring Boot + Spring Batch** ETL microservice processing **millions of product records**, enabling a real-time product data pipeline from multiple source systems and APIs.
- Implemented event-driven architecture using **Kafka** (Avro, Schema Registry) for bulk and delta feeds, achieving near real-time data synchronization.
- Optimized large-scale batch jobs (up to **5M rows/run**) using chunking and paging to meet strict SLA requirements.
- Built a serverless **Go-based Kafka consumer** on **AWS Lambda**, processing **500K+ daily events** with idempotency and sub-500ms latency.
- Migrated **Dropwizard** microservices to Spring Boot **Java 21**, improving API performance by **30%** through optimized queries and caching.
- Implemented end-to-end observability with **Datadog**, including custom metrics for event throughput, failure rates, and Kafka lag, improving operational visibility and **reducing the MTTD**.
- Designed and maintained **GitLab CI/CD** pipelines with multi-stage deployment and rollback workflows, enabling reliable and automated application releases.

### Full Stack Developer

Simplyphi, Remote

February 2023 - May 2024

- Developed responsive and scalable web applications using **React, TypeScript, NodeJs, Python, and FastAPI**, improving application performance and code reusability by over **40%**.
- Built an automated **OCR-based floor plan analysis system** capable of extracting measurements and calculating total floor area from architectural images with over **95%** extraction accuracy.
- Automated the retrieval and processing of thousands of floor-plan image links from a **PostgreSQL** database, reducing manual processing effort by nearly **80%**.
- Implemented text and shape recognition using **Pytesseract** and **Azure Computer Vision API**, significantly improving the accuracy and reliability of floor plan data extraction.
- Designed and optimized logic to compute total floor area from extracted architectural measurements, increasing processing efficiency by over **60%**.
- Developed a **Housing Market Report Generator** for London regions and local authorities, providing analytics on properties for sale/rent, average asking prices, market growth trends, and other real-estate insights.
- Integrated backend services with databases and automated workflows for seamless data retrieval, processing, and updates, improving operational efficiency by over **50%**.

## EDUCATION

---

Indian Institute Of Technology Indore

Bachelor Of Technology, Civil Engineering

Indore, India

2024

## TECHNICAL SKILLS

---

- **Core CS Concepts:** System Design, Data Structures, Algorithms, Machine Learning and AI, OOP, Design Patterns
- **Programming Languages:** Java, Go, C++ , Python, Javascript
- **Generative AI & LLM Engineering:** Model Context Protocol, AI Agent Workflows, LangChain, Langgraph, Prompt Engineering, Amazon Bedrock, Azure Computer Vision
- **Frameworks & Data Platforms:** Spring Boot, Spring Batch, FastAPI, Langchain, Dropwizard, React, Kafka
- **Streaming & Serialization:** Kafka, Avro, Confluent Schema Registry
- **DevOps & Observability:** Docker, CI/CD Pipelines, Datadog
- **Databases & Persistence:** MySQL, PostgreSQL, Spring JDBC, JPA, Hibernate, Redis
- **Cloud & Serverless:** AWS (Lambda, EC2, S3, KMS, ECS, EventBridge, SNS, SQS, CloudTrail)
- **Testing:** Junit, Spock (Groovy), Gherkin
- **Tools & AI:** Gitlab Duo, Claude, Antigravity, Codex

## PROJECTS

---

### VitaTrack AI | *Go, Angular, AI For Bharat Hackathon, 2026*

- \* Developed a full-stack health journaling web application with **Angular (frontend)** and **Go (Gin backend)**.
- \* Built backend services for processing health logs and document uploads, integrating **Amazon Bedrock** for AI-driven insights and **AWS Texttract** for automated document analysis.
- \* Implemented document analysis pipelines to extract, process, and generate actionable health insights, enhancing user engagement and decision-making.
- \* Enabled AI-powered summarization of medical reports and health documents, helping users quickly understand critical health information and recommendations.
- \* Designed an interactive health dashboard for tracking daily vitals, health logs, and wellness trends through intuitive visualizations.
- \* Containerized the application using **Docker** and deployed it on **Google Cloud Run**, ensuring scalable and reliable cloud-native deployment.
- \* Implemented automated **CI/CD pipelines** integrated with the GitHub repository for streamlined testing, builds, and deployments.
- \* Deployed and maintained the live application, making it publicly accessible at [VitaTrack Live Website](#).

### ChatterConnect | *React, Node, MongoDB, Socket.io*

- \* Developed a full-stack real-time chatting application using the MERN stack and Socket.IO for bidirectional communication.
- \* Implemented secure JWT-based authentication and authorization for user sessions.
- \* Built real-time one-to-one and group chat functionality with instant message delivery.
- \* Designed profile management features allowing users to update personal information and profile details.
- \* Added user search functionality to discover and connect with people on the platform.
- \* Developed responsive frontend components and REST APIs for seamless user experience and scalable communication.
- \* Deployed and maintained the live application, making it publicly accessible at [ChatterConnect Live Demo](#).

### Zozo Bot - Automatic LinkedIn Apply | *FastAPI, LangChain, Playright*

- \* Built an AI-powered LinkedIn job application bot using Playwright and FastAPI to automate end-to-end job applications.
- \* Integrated an LLM-based question-answering system that leverages resume context to generate accurate responses for dynamic application forms.
- \* Designed a modular workflow for resume processing, prompt orchestration, and browser automation, significantly reducing manual effort in job applications.

## ACHIEVEMENTS

---

- Achieved **1st position** in university and secured **All India Rank 137**, at **CodeKaze 2023**
- **Specialist at Codeforces**, achieved a maximum rating of 1482.
- Cracked **JEE Advanced** with a top 0.7% rank, the most competitive engineering entrance exam in India, and secured a seat at an IIT.
